The structure of the universal q-central extension of the q-Witt algebra, the q-Virasoro algebra, is also determined. q-Lie algebras are investigated and the q-PBW theorem for the universal enveloping algebras of q-Lie algebras is proved. A realization of a class of representations of the q-Witt algebras is given.

Discovering the underlying structure of a dynamical environment involves learning representations that are interpretable and disentangled, which is a challenging task. In physics, interpretable representations of our universe and its underlying dynamics are formulated in terms of representations of groups of symmetry transformations. We propose a physics-inspired method, built upon the theory ...

The structure and representations of the quantum supergroup OSPq(2|2n) are studied systematically. The algebra of functions on the quantum supergroup, which specifies the quantum supergroup itself, is taken to be the superalgebra generated by the matrix elements of the vector representation of the quantized universal superalgebra Uq(osp(2|2n)).

Queue Representation. As we now understand that in queue, we access both ends for different reasons. The following diagram given below tries to explain queue representation as data structure – As in stacks, a queue can also be implemented using Arrays, Linked-lists, Pointers and Structures.

In group theory, the quaternion group Q 8 (sometimes just denoted by Q) is a non-abelian group of order eight, isomorphic to a certain eight-element subset of the quaternions under multiplication. It is given by the group presentation = " ... " =, = = = " , where e is the identity element and e commutes with the other elements of the group.

Chapter 3: Representations of finite groups: basic results  
We introduce induction and restriction functors to the category  $\mathcal{O}$  of  $\mathcal{U}_q(\mathfrak{sl}(\mathfrak{n}))$ . As a by product we classify simple finite-dimensional representations of  $\mathcal{U}_q(\mathfrak{sl}(\mathfrak{n}))$  and we obtain a cluster algebra structure on the Grothendieck ring of finite-dimensional representations.

3 Representations of finite groups: basic results Recall that a representation of a group G over a field k is a k-vector space V together with a group homomorphism  $\rho: G \rightarrow GL(V)$ . As we have explained above, a representation of a group G over k is the same thing as a representation of its group algebra k[G].
