Anatomical Structure. The vagina is a fibromuscular tube with anterior and posterior walls - these are normally collapsed and thus in contact with one another.. The shape of the vagina is not a round tunnel. In the transverse plane it is more like an "H" lying on the side. At the upper ending, the vagina surrounds the cervix, creating two domes (fornices or vaults): an anterior and a ...

The term bone refers to a family of materials, all of which are built up of mineralized collagen fibrils. They have highly complex structures, described in terms of up to 7 hierarchical levels of organization. These materials have evolved to fulfill a variety of mechanical functions, for which the structures are presumably fine-tuned. Matching structure to function is a challenge.

Despite these structure-function insights, we currently are unable to predict a priori how a particular substitution alters enzyme function in relation to temperature. A predictive ability of this nature might allow a proteome-wide survey of adaptation to temperature and reveal what fraction of the proteome may need to adapt to temperature changes of the order predicted by global warming models.
