An ellipse is the set of all points (x, y) in a plane, the sum of whose distances from two distinct fixed points, foci, is constant. The line through the foci intersects the ellipse at two points called verticies. The chord

joining the vertices is the major axis, and its midpoint is the center of the ellipse.

An ellipse is the set of points in a plane such that the sum of the distances from two fixed points in that plane stays constant. The two points are each called a focus. The plural of focus is foci. The midpoint of

the segment joining the foci is called the center of the ellipse. An ellipse has two axes of symmetry.
