Synergetics By Hermann Haken
Synergetics is an interdisciplinary science explaining the formation and self-organization of patterns and structures in open systems far from thermodynamic equilibrium. It is founded by Hermann Haken, inspired by the laser theory. Haken's interpretation of the laser principles as self-organization of

I studied synergetics when I was a student in the USSR, it was the time when the USSR was dissolving and all kinds of obscure theories were in fashion, like it was the end of the world. This "science" is a conglomerate of various ideas and techniques from different branches of sciences without a cohesive theory that could make it otherwise an actionable area of science.
