I have an option to choose between the two books Mathematical Analysis by Tom Apostol and Principles of Mathematical Analysis by Walter Rudin as I was gifted Rudin by a friend and ended up buying the other book as well. I will be indebted if someone told me which one is the tougher one and which one is better for the self-learner (I am in high school and have no access to a professor or anyone).

Apostol's treatment of basic topology as an extension of set theory is particularly good! Once you have a clear understanding of limits as they relate to topology then you'll finally "get" the whole delta-epsilon arguments from calculus. As an introductory text to the world of mathematical analysis I don't think this book can be beat.

Professor Dr. Apostol wrote a landmark Calculus text that consistently teaches logical proofs. A reference book and a great text. This book represents his great loves of number theory and teaching. He takes you by the hand and teaches you how to ride that bicycle, drive that car, fly that plane and think for yourself.
