tensors are just a language for describing multilinear functions. e.g. dot products are tensors. because they are bilinear. I'd like to learn about tensors so i can start learning about special relativity. you can start learning special relativity without tensors.

What are some benefits and drawbacks of using tensor ...

If you follow machine learning, you have definitely heard of neural networks. If you are a physicist, you may have heard of tensor networks too. Both are schemes for assembling simple units (neurons or tensors) into complicated functions: decision functions in the case of machine learning or wavefunctions in the case of quantum mechanics.

In fact, tensor decomposition techniques are traditionally called "spectral learning" since they are seen as derived from SVD. But now we have other methods to do tensor decompositions that have better theoretical guarantees and practical performances. See the survey by Kolda and Bader 2009 for more discussions.
