It is important to remember that the same Brodmann area numbers in humans and primates do not translate to other species. In addition, these Brodmann areas have been widely redefined, discussed, debated, and refined exhaustively based on cytoarchitecture, cortical functions, and neuroplasticity.

A Proposed Number System for the 107 Cortical Areas of ...

Brain mapping based on the regional distribution of cortical areas is a valuable concept beyond the generation of an atlas. It is a way to understand cortical organization by integrating in vivo structural and functional imaging data and post mortem high-resolution cytoarchitectonic observations into a common reference space (Amunts et al., 2007, Amunts et al., 2014b, Mazziotta et al., 2001 ...)

Brodmann used numbers to categorize the different architectural areas and he believed that these regions served a unique functional purpose. Constantin von Economo and Georg N. Koskinas, two neurologists in Vienna, produced a landmark work in brain research by defining 107 cortical areas on the basis of cytoarchitectonic criteria.
