In mathematics, a semigroup is an algebraic structure consisting of a set together with an associative binary operation. The binary operation of a semigroup is most often denoted multiplicatively:  $x \cdot y$ , or simply  $xy$ , denotes the

result of applying the semigroup operation to the ordered pair. Associativity is formally expressed as that  $x \cdot (y \cdot z) = (x \cdot y) \cdot z$  for all  $x, y$  and  $z$  in the semigroup. Semigroups may be considered a special case of magmas, where the operation is associative, or as a ...
