Bioarchaeology - Wikipedia

To determine the identifications of archaeological animal bones, zooarchaeologists use a comparative collection. A comparative collection is a collection of identified animal bones by species and skeletal element. Step One: The first step in analyzing animal remains is to sort the bones by animal class: mammal, fish, reptile/amphibian, and bird.

1. Introduction. While the importance of ancient animal bones for understanding human prehistory was recognized by some as early as the 1700s -- especially in establishing that humans even had a prehistory (Grayson, 1983) -- early examples of faunal analysis, the study of ancient animal remains, are few and far between.As the discipline of archaeology grew in the following centuries, the ...

The contributions of animal bones from archaeological ...

Zoo-archaeology (or archaeo-zoology), also known as faunal analysis, is a branch of archaeology that studies remains of animals from archaeological sites. Faunal remains are the items left behind when an animal dies. These include bones, shells, hair, chitin, scales, hides, proteins and DNA. Of these items, bones and shells are the ones that occur most frequently at archaeological sites where ...

Animal Bone Identification - Peterborough Archaeology

This is one of a few books I own on animal archaeology but this is probably my favorite. As a second year Archaeology student at the University of Southampton I found this particularly useful for osteological methods. It is pretty comprehensive in how an Archaeologist or Zooarchaeologist would treat bones, quantify them and assess them.
