Explosives | Review | Chemistry World  
Mechanical explosions occur when a closed system is heated—a violent pressure rupture can occur. However, this doesn't make a heated can of soup an explosive. An explosive substance is one which reacts chemically to produce heat and gas with rapid expansion of matter. A detonation is a very special type of explosion.

RDX - Wikipedia  
An explosive perfectly capable of producing an explosion may liberate its energy without producing one. Black powder, for example, may burn in the open air. An explosion may occur without an explosive, that is, without any material which con- tains intrinsically the energy needful to produce the explosion.
