The Elements of Programming Style, by Brian W. Kernighan and P. J. Plauger, is a study of programming style, advocating the notion that computer programs should be written not only to satisfy the compiler or personal programming "style", but also for "readability" by humans, specifically software maintenance engineers, programmers and technical writers. It was originally published in 1974.

I love the title of this first subsection — "The Elements of Programming". I'm not sure whether the authors intended the reference to Strunk and White's classic The Elements of Style text, but I believe that their analysis of the primitive elements, methods of combination, and means of abstraction in programming provide an apt parallel for the ways that Strunk and White describe the ...

Writing a program to count the number of bits that are set to 1 in an integer is a good way to get up to speed with primitive types. The following program tests bits one-at-a-time starting with the least-significant bit. It illustrates shifting and masking; it also shows how to avoid hard-coding the size of the integer word.

```
def count_bits(x):
```
