WG 11 deals with wireless local area network (WLAN). Other well known standard in this series is IEEE 802.3 Ethernet. Additionally, new amendments improve the standard. We denote them with additional letter after the standard name, i.e. 802.11a, 802.11n or two letters as the set of single letters is not sufficient for IEEE, e.g 802.11ac.

Formation of the 802.11 Standard In 1988, the IEEE established a committee to develop the 802.11 standard.[1].7] All of the 802 standards deal with the data link layer and physical layer of the OSI reference model. Part 11, or 802.11, defines all of the specifications for wireless local area networks.
