The Flower Botany

botany: plant & flower science. Botany is the branch of biology that deals with plants. It involves the study of the structure and properties of plant life, including flowers and trees. Also included are plant classification and the study of the interactions of plants with their physical environment.

Botany - Wikipedia

My husband bought me a gorgeous bouquet of red roses and lilies for Valentine's Day. He graciously let us disassemble a lily for our Montessori botany lesson to study the parts of a flower. Plus, spring is in the air and we like to follow the seasons in our Montessori inspired homeschool. So this was the perfect opportunity to examine a beautiful sweet smelling lily.

Murder, they wrote... Plant forensic scientists help solve ...

The sepals are the outermost part of the flower (where the flower emerges from the stem), and resemble green flaps that protect the flower when it is still a bud. The petals are usually the flower's most distinctive part and signal to animal pollinators (animals who transfer pollen, containing male sex cells to the pistil containing female sex cells) with bright colors and strong scents.

Botany: Flower Biology & Terminology | Teleflora

Botany 101 Flower Parts A flower is a highly differentiated and specialized branch of the stem bearing modified leaves or flower parts.

Montessori Botany Nomenclature : Parts of the Flower

Terms in this set (...) Peduncle. flower stalk where flowers grow. Receptacle. expanded part where all of the parts are located. 4 main parts of a flower. pistil, stamen, petal, sepal. Stamen.

Nelumbo nucifera - Wikipedia

The flower is connected to the plant via the receptacle and the stem or peduncle. Sepals . When flower buds develop the sepals protect them, like the shuck of a corn cob. They are leafy and green. Stamens . This is the male part of the flower which consists of the anthers and filaments together.

They have been at it for decades, these two sleuths from CU-Boulder, using their expertise in plant forensics to help investigators solve crimes, often murder. And now the pair, emeritus professors Jane Bock and David Norris, have teamed up on a new forensic plant science book expected to aid detectives, lawyers and judges around the world in better understanding and solving

Montessori Botany: Examining the Parts of a Flower

The "male" or pollen-bearing part is called the stamen, and is composed of the filament and the anther. The "female" or seed-bearing part is called the pistil, and is composed of the ovary, the stigma, and the style. A flower may have exclusively male parts, exclusively female parts, or commonly, both.
