Astronomers have spotted a high-velocity star traveling at a blistering six million kilometers per hour (3,728,227 miles per hour) that the supermassive black hole at the heart of the Milky Way ejected five million years ago. The researchers saw the star, known as S5-HVS1 and located in the constellation of Grus the Crane, was moving 10 times faster than most stars in the Milky Way.

Astronomers Spotted a High-Velocity Star Launched by the ...
A "hook echo" describes a pattern in radar reflectivity images that looks like a hook extending from the radar echo, usually in the right-rear part of the storm (relative to the motion of the storm). A hook is often associated with a mesocyclone and indicates favorable conditions for tornado formation. The hook is caused by the rear flank downdraft and is the result of precipitation ...
