NACA Airfoils | NASA

This NACA airfoil series is controlled by 4 digits e.g. NACA 2412, which designate the camber, position of the maximum camber and thickness. If an airfoil number is . NACA MPXX e.g. NACA 2412 then: M is the maximum camber divided by 100. In the example M=2 so the camber is 0.02 or 2% of the chord;

This paper investigates the NACA 63 and 64
6-digit series of airfoils tested in the NACA
LTPT in view to verify the RFOIL calculated
airfoil characteristics for high Reynolds

angles of 15% and 18% thick airfoils from
these series are identified, both in the

The NACA airfoils are airfoil shapes for aircraft wings developed by the National Advisory Committee for Aeronautics (NACA). The shape of the NACA airfoils is described using a series of digits following the word "NACA." The parameters in the numerical code can be entered into equations to precisely generate the cross-section of the airfoil and calculate its properties.

NACA 8-Series: A final variation on the 6- and 7-Series methodology was the NACA 8-Series designed for flight at supercritical speeds. Like the earlier airfoils, the goal was to maximize the extent of laminar flow on the upper and lower surfaces independently. The naming convention is very similar to the 7-Series, an example being the NACA 835A216.
