Perception and the Perceptual Process

Our perception of the environment depends on: a. both the properties of the environmental objects and properties of the electrical signals in the nervous system. b. the properties of the objects in the environment. c. the properties of the electrical signals in the nervous system. d. None of these are true.

The Perception of the Environment: Essays on Livelihood ...

Perception describes the multiple ways in which people receive information from their surroundings, allowing them to know their environment. Cognition, or the way people understand the environment, occurs through immediate sensory experience coupled with memories and experiences from the past. While psychologists often treat these as different phenomena or faculties, the papers in this section challenge that bifurcation.

Perception - Wikipedia

Perception in psychology can be defined as the analysis of sensory information within the brain. As we go through our day, we are surrounded by the rich stimuli of modern life and we rely heavily on our sight to inform us of where we are placed within this world. Through perception we obtain a description of our surroundings and what they mean.
