To call it reptilian is like calling our arms and legs reptilian. Mammals and reptiles are different everywhere, as MacLean points out. In labeling part of our brain "reptilian" MacLean is referring to the origin of the gross structure, but is also being metaphorical. We do not have an entire reptilian brain within us as some inner beast.

"The Triune Brain, Hypnosis, and the Evolution of Consciousness" is packed full of unique ideas. To me the main premise of the book is consciousness. Using theories from Julian Jaynes, Paul MacLean, and David Riesman this book explores the origins of human consciousness, what level our consciousness currently is at as a species, and where it has the potential take us.

Triune brain - Wikipedia

The Triune Brain. Neuroscientist Paul D. MacLean formulated a model of the brain in the 1960s, detailed in his 1990 book *The Triune Brain in Evolution*, describing the brain in terms of three distinct structures that emerged along an evolutionary path. Although this model is a highly simplified explanation of brain activity and organisation, it provides an easy-to-understand approximation of the hierarchy of brain functions.
