### **Hunger v. Obesity: Which Problem is Bigger? - Borgen Project**

The brain doesn't get this message and believes that the body is starving, even though there is food in the stomach. Without this message or signal, this can cause insatiable hunger, and ultimately lead to extreme weight gain. So, to recap, rare genetic disorders of obesity may be caused when the MC4R pathway in the brain isn't working properly.

### **Why Am I So Hungry? Science of Hunger | Lead for Rare Obesity**

High levels of stress and limited access to health care can contribute to weight gain. Hunger may be a stressor that results in disordered eating, reduced physical activity, and depression, all of which may be related to weight gain. And, hunger and/or poverty may also cause a stress response that is hormonal, and contributes to obesity. 2
