Alireza Bahadori PhD, in Thermal Insulation Handbook for the Oil, Gas, and Petrochemical Industries, 2014. Abstract. Thermal insulation is a critical element in the design and operation of flowlines in deep waters due to a combination of low temperatures and high pressure. As a result of these conditions, there are stringent requirements for optimal insulation.

The temperature range, within which the term "thermal insulation" will apply, is from -75°C to 815°C. All applications below -75°C are termed "cryogenic", and those above 815°C are termed "refractory". Thermal insulation is further divided into three general application temperature ranges as follows: A. Low Temperature Thermal Insulation
