List of thermodynamic properties - Wikipedia

Thermodynamics is the branch of physics that deals with heat and temperature, and their relation to energy, work, radiation, and properties of matter. The behavior of these quantities is governed by the four laws of thermodynamics which convey a quantitative description using measurable macroscopic physical quantities,...

Within thermodynamics, a physical property is any property that is measurable, and whose value describes a state of a physical system. Properties is defined as the characteristic feature of a system by which it can be specified. Some constants, such as the ideal gas constant, R , do not describe the state of a system, and so are not properties.
