If you thought this was like the 'Thinking in Java' type of a book, you would be mistaken. The beginning section is most rudimentary, almost like the code that used to be written in the late 1990s when Javascript was more of a helper in showing popups/ generating timer events/ reading form field values. No one writes code like that anymore.

Thinking in JavaScript. 2017-09-05. Javascript. Over the last week I've gradually come to the realization that the fundamental reason why most people have trouble with JavaScript is because it doesn't fit their mental model of how programming should be done. This isn't to say that most programmers don't manage to achieve their end goal.

Thinking of x++ as x = x + 1 is misguided, lazy thinking, and I shouldn't be surprised that it led me astray. Moreover, I was thinking of the first line all wrong, as well. What I thought was, the [[]] is making an array (the outer []), and then the inner [] is trying to be a property access which means it gets stringified (to ""), so it's ...
