*Turner syndrome is related to the X
chromosome, which is one of the two sex
chromosomes. People typically have two sex
chromosomes in each cell: females have two X
chromosomes, while males have one X
chromosome and one Y chromosome. Turner
syndrome results when one normal X chromosome*

In Turner syndrome, an individual does not have the usual pair of two complete X chromosomes. The most common scenario is that a girl has only one X chromosome in all of her cells. However, some girls with Turner syndrome have a full or partial absence of the X chromosome in only some of their cells. When an individual has a different chromosomal content in his/her cells, it is called mosaicism.
