Ultrafiltration can be used for the removal of particulates and macromolecules from raw water to produce potable water. It has been used to either replace existing secondary (coagulation, flocculation, sedimentation) and tertiary filtration (sand filtration and chlorination) systems employed in water treatment plants or as standalone systems in isolated regions with growing populations. Ultrafiltration Handbook

The Ultrafiltration Handbook is just that - a handbook. It contains a wealth of information about the UF process, and it would be an excellent addition to any library. In addition, it would make an excellent textbook for teaching the fundamentals of UF.
