Learn more about Equipment for Peripheral Nerve Blocks LANDMARKS AND PATIENT POSITIONING. Typically, the block is performed with the patient in the supine position. For the radial nerve block, the arm could also be flexed at the elbow, and the hand is placed on the patient's abdomen (see Figure 6a).This position allows for the most practical application of the transducer.

In conclusion, this study showed that an ultrasound-guided block of the median, ulnar, and medial antebrachial cutaneous nerves at the level of upper-median 1/3 of the arm, and a block of the radial and musculocutaneous nerves at the level of low-median 1/3 of the arm, allowed improved retention of motor function at the elbow compared to axillary block.

Radial Nerve. Of the three nerves, the radial nerve is the most challenging to visualize on ultrasound. There are two approaches to performing a radial nerve block. In the first approach, the radial nerve can be found just proximal to the wrist crease on the radial side of the radial artery (Figure 4a and 4b).

ULTRASOUND ANATOMY. Three individual nerves are involved in a wrist block: the median, ulnar, and radial nerves. The Median Nerve. The median nerve crosses the elbow medial to the brachial artery and courses toward the wrist deep to the flexor digitorum superficialis in the center of the forearm.

Distal peripheral nerve blocks allow preservation of proximal muscle function of the upper limb. The inability to use the affected limb due to the motor block of proximal and distal musculature has been shown to reduce patient satisfaction.[] A recent randomized controlled trial comparing ultrasound guided supraclavicular plexus block with distal peripheral nerve blocks for outpatient hand ...

### Ultrasound Guided Nerve Block - Overview - ACEP

Forearm nerve blocks provide excellent anesthesia of the hand including fractures, lacerations, or deep space abscess I&Ds of the hand. Unfortunately, the forearm nerve blocks do not provide anesthesia to the volar forearm ( musculocutaneous nerve, medial antebrachial cutaneous nerve ) or the wrist ( musculocutaneous, AIN and PIN are missed with forearm blocks).
