Urban open space is often appreciated for the recreational opportunities it provides. Recreation in urban open space may include active recreation (such as organized sports and individual exercise) or passive recreation, which may simply entail being in the open space. Research shows that when open spaces are attractive and accessible, people are more likely to engage in physical activity.

This means generic design plotting of 'green space' on an urban plan, however aesthetically pleasing, does not specifically target mental wellbeing. Time plays a significant role. There is no point having great green spaces if these do not provide good enough reason or opportunity to linger long enough to experience the restorative benefits.
