Internet of Things (IoT) is a sprawling set of technologies and use cases that has no clear, single definition. One workable view frames IoT as the use of network-connected devices, embedded in the physical environment, to improve some existing process or to enable a new scenario not previously possible.

The Rock64 Media Board comes loaded with a 1.5GHzRockchip RK3328 64-bit quad-core A53 processor and a Mali-450 MP2 GPU. It ships in three configurations offering 1GB (\$25), 2GB (\$35), and 4GB (\$45) of 1600MHz LPDDR3 RAM. This single board computer has the same form-factor as a Raspberry Pi 4, but the Rockchip is a little bit faster than the Broadcom processor found on the RPi Model 3 B+.

While Bootlin is largely known for its expertise with the Buildroot and Yocto/OpenEmbedded build systems, we do also work with other build systems for customer projects. Specifically, in 2019, we have worked for one of our customers on extending OpenWrt to add support for two security features: dm-verity and SELinux, which we have contributed to upstream OpenWrt.

Learn - Yocto Project
SWUpdate is a Linux Update agent with the goal to provide an efficient and safe way to update an embedded system. SWUpdate supports local and remote updates, multiple update strategies and it can be well integrated in the Yocto build system by adding the meta-swupdate layer. Examples using this ...

Using Yocto Project With Beaglebone
Welcome to the Yocto Project! The Yocto Project is an open-source collaboration project focused on embedded Linux developers. Among other things, the Yocto Project uses a build system based on the OpenEmbedded (OE) project, which uses the BitBake tool, to construct complete Linux images. The BitBake and OE components are combined together to form Poky, a reference build system.
