Validity in Sociology: Reliability in Research

Attention to the judgments about the validity of research-generated knowledge claims is integral to all social science research. During the past several decades, knowledge development has been split into two communities: conventional researchers and reformist researchers. Narrative research is positioned within the reformist community.

Validity And Social Experimentation Donald

The leading social research methodologists and evaluators address the issues of validity, research design and social experimentation in this first of two volumes inspired by the work of Donald Campbell and sponsored by the American Evaluation Association.

(PDF) Validity and Reliability in Social Science Research

Validity in Social Research Validity refers to the extent to which an indicator (or set of indicators) really measure the concept under investigation. This post outlines five ways in which sociologists and psychologists might determine how valid their indicators are: face validity, concurrent validity, convergent validity, construct validity, and predictive validity.

Education Research and Perspectives, Vol.38, No.1 105 Validity and Reliability in Social Science Research Ellen A. Drost California State University, Los Angeles Concepts of reliability and validity in social science research are introduced and major methods to assess reliability and validity reviewed with examples from the literature.

Validity and Reliability in Social Science Research

Setting up an experiment so that it has sound internal and external validity involves being mindful from the start about factors that can influence each aspect of your research. It's best to spend extra time designing a structurally sound study that has far-reaching implications rather than to quickly rush through the design phase only to discover problems later on.

Understanding Internal and External Validity

In sociology and research terms, internal validity is the degree to which an instrument, such as a survey question, measures what it is intended to measure while external validity refers to the ability of results of an experiment to be generalized beyond the immediate study.
