(1997), differs somewhat from the VDI 2045 (1993) recommenda tions. PTC 10 recommends four pressure taps and four temperature stations for inlet and discharge. It now also follows the good practice to rotate the temperature measurements by 45 degrees from the pressure measurements. The authors recommend

Capacity. Overdesign An overdesign will generally be specified for the blower as a safety margin to ensure the plant can achieve its design production rate. Typically, and overdesign of 5% of the normal design flow is specified. In some cases the overdesign may be as high as 10% depending on design requirements specified by the plant operator.
