(PDF) Anatomy and Physiology - Anne Waugh & Alison Grant ...

In physiology, a stimulus is a detectable change in the physical or chemical structure of an organism's internal or external environment. The ability of an organism or organ to detect external stimuli, so that an appropriate reaction can be made, is called sensitivity. Sensory receptors can receive

information from outside the body, as in touch receptors found in the skin or light receptors in ...

The vestibulospinal tract is a neural tract in the central nervous system. Specifically, it is a component of the extrapyramidal system and is classified as a component of the medial pathway. Like other descending motor pathways, the vestibulospinal fibers of the tract relay information from nuclei to motor neurons. The vestibular nuclei receive information through the vestibulocochlear

It is the sense of visual harmony that separates the work of art from the relative chaos of the surrounding world. It refers to the "oneness" or organization of similarities between elements that make up a work of art. Artists use the principle of unity to make choices that link visual elements to each other in a composition.
