STATEMENT OF THE PROBLEM. William Bates (1920) wrote about the importance of changing the vision care paradigm* This dissertation explores his concepts about the etiology and implications of myopia. His thinking and experience have provided a model which forms the basis for this research. Bates was an ophthalmologist who lived from 1860 to 1931.

Near-sightedness - Wikipedia

Almost all studies concerning the hardening of the lens relate to presbyopia findings, not, myopic changes. Because spoiler alert, myopia reduction due to hardening lens isn't significant enough to warrant much study. And yes, your distance vision can certainly appear to improve with age. A little bit, over years.

Nearsightedness: What Is Myopia? - American Academy of ...

The problem almost always goes back to axial elongation, an elongation of the eyeball. This goes back to lens-induced myopia, and the fact that your healthy eye continually grows longer in response to the lens stimulus. If this is unfamiliar to you, I strongly recommend this quick quick read. The retina isn't part of your eyeball.

Why myopia progression is a concern

Myopia occurs when the eyeball is too long, relative to the focusing power of the cornea and lens of the eye. This causes light rays to focus at a point in front of the retina, rather than directly on its surface. Nearsightedness can also be caused by the cornea and/or lens being too curved for the length of the eyeball.
