Exposure to these cells will result in the production of antibodies to the Rh factor which can cross the placenta and bind to the RBCs of an Rh positive fetus. Complement can then bind to this antigen-antibody complex destroying the fetal RBCs.

Whodunit--Simulated Blood Typing Lab by Sarah Ward on Prezi
Of the four ABO blood types (A, B, AB, and O), blood type O, characterized by the absence of A or B antigens, is the most common in the United States, in ~45% of the population. Type A is next in frequency, found in ~40% of the population. The incidences of types B and AB are ~10% and ~4% respectively.
