Waves and Wave Properties (The following lecture material aligns with the slides.) A wave is a disturbance that carries energy from one place to another. Matter is NOT carried with the wave! A wave can move through matter (called a "medium"), but some waves do not need a medium to be able to move. If a wave needs a medium, we call it a ...

When a wave reaches the end of the medium, it doesn't just vanish. A portion of its energy is transferred into what lies beyond the boundary of that medium. And a portion of the energy reflects off the boundary and remains in the original medium. This Lesson discusses the principles associated with this behavior that occurs at the boundary.
