(WSL) distributions installed, the terminal will automatically create profiles for those distros as well.

MS-DOS - Wikipedia

Refresh PC: When you refresh a Windows 10 PC, Windows will refresh and/or replace all system files. Refreshing a PC doesn't remove your personal files. However, Windows will uninstall all applications except the ones that come pre-installed, like the built-in store apps. **Reset PC:** Resetting is the more aggressive version of Refresh. That is, resetting a PC removes all installed applications and

How to Refresh or Reset PC From Command Prompt on Windows 10

Using a command-line switch doesn't mean you have to type the whole startup command at the command prompt. You can start the Office app as usual, by clicking the program icon on the desktop, or by clicking the program name on the Start menu. All startup methods essentially do the same thing: they run the app's .exe file, even if you don't actually type the command or even see it.

Windows Terminal Preview 1.3 Release | Windows Command Line

Mapping a network drive to a shared folder from Windows' graphic interface isn't hard. But if you already know the network path for the shared folder, you can map drives a lot quicker using the Command Prompt. Mapping a drive to a network share assigns that share a drive letter so that it's easier to work with.
