Wireless Networking Technologies  
Wireless network deployment in three  
service classifications — wireless personal  
access network (WPAN), wireless local  
area network (WLAN), and wireless wide  
area network (WWAN) — was discussed.  
Today, the core technology behind the  
wireless service in each of these service  
classifications is unique and, more  
important, not an inherently integrated  
seamless networking strategy.

Wireless sensor network (WSN) refers to a group of spatially dispersed and dedicated sensors for monitoring and recording the physical conditions of the environment and organizing the collected data at a central location. WSNs measure environmental conditions like temperature, sound, pollution levels, humidity, wind, and so on. These are similar to wireless ad hoc networks in the sense that ...

Wireless Networking technologies  
connect multiple computers, systems and  
devices together without requiring wires  
or cables: a wireless local area network  
or WLAN comes under Wi-Fi. WiMAX  
There are wireless broadband systems  
that offer fast Web surfing without being  
getting connected through cable or DSL  
(Example of wireless broadband is  
WiMAX).

Cisco wireless networking combines the mobility of wireless with the performance of wired networks, offering a dramatic performance increase compared to legacy 802.11a/g networks. Cisco delivers 802.11n and 802.11ac excellence designed to effectively support a vast range of business-focused wireless networks. from the most basic to today's most demanding high-density environments.

What is Wi-Fi Multimedia (WMM)? -  
Definition from WhatIs.com

Tiny wireless devices and the enormous growth of wireless communication technologies have already established the stage for large-scale deployment of wireless sensor networks (WSNs). A typical WSN consists of a large number of small, low-cost sensor nodes, which

Abstract: Wireless Multimedia Sensor  
Networks (WMSNs) is comprised of small  
embedded video motes capable of  
extracting the surrounding

environmental information, locally processing it and then wirelessly transmitting it to parent node or sink. It is comprised of video sensor, digital signal processing unit and digital radio interface. In this paper we have surveyed existing WMSN hardware and ...

802.11n . 802.11n (also sometimes known as Wireless N) was designed to improve on 802.11g in the amount of bandwidth it supports, by using several wireless signals and antennas (called MIMO technology) instead of one. Industry standards groups ratified 802.11n in 2009 with specifications providing for up to 600 Mbps of network bandwidth. 802.11n also offers a somewhat better range over earlier ...
