of wood. The steaming time may vary depending on the species of wood, the degree of bending required, and the actual thickness. 7. When the steaming is complete, you need to work quickly to get the workpiece into your forms while it is still hot. Leave the remaining workpieces in your steam box until you are ready to clamp them in the forms.

fiber stress in bending. As is true of the properties of any structural material, the allowable engineering design proper-ties must be either inferred or measured nondestructively. In wood, the properties are inferred through visual grading criteria, nondestructive measurement such as flatwise bend-

from bending tests are given in Tables 4:3 to 4:5. Represen-tative coefficients of variation of EL determined with bending tests for clear wood are reported in Table 4:6. As tabulated, EL includes an effect of shear deflection; EL from bending can be increased by 10% to remove this effect approximately.
