Workflow Modeling: Tools for Process Improvement and ...

A workflow management system (WfMS) is a software system for setting up, performing, and monitoring of a defined sequence of processes and tasks, with the broad goals of increasing productivity, reducing costs, becoming more agile, and improving information exchange within an organization. These systems may be process-centric or data-centric, and they may represent the workflow as graphical maps.

Business Process Modeling Techniques Explained with ...

Collect data about how the workflow model performs in the real world, and see if you can tweak any of its parts to enhance efficiency. Later on, you can scale the workflow model for process upgrades rather than creating a new one. When you use the right tool to create these workflow models, you make things a whole lot easier.
