1. Introduction: five first lessons
This course is an introduction to game theory and strategic thinking. Ideas such as dominance, backward induction, Nash equilibrium, evolutionary stability, commitment, credibility, asymmetric information, adverse selection, and signaling are discussed and applied to games played in class and to examples drawn from economics, politics, the movies, and elsewhere.

Microeconomic Theory (501b) Problem Set 8. Mechanism Design
Finally, note that extending this problem to allowing for mixed strategies is straight-forward: if we, given some beliefs, have multiple optimal pure strategies, then any mix of those strategies is also optimal. 3. Consider two decision makers with the same set of actions A and the same set of states

- Nash Equilibrium: Shopping, Standing and Voting on a Line Overview. We first consider the alternative "Bertrand" model of imperfect competition between two firms in which the firms set prices rather than setting quantities. Then we consider a richer model in which firms still set prices but in which the goods they produce are not identical.
