Abstract. In this paper, we present EMPAR, an interactive synthesis environment for hardware emulations. EM-PAR provides an open-ended design environment for the development of hardware emulators, which is capable of supporting: (1) a variety of EM architectures (2) a variety of EM synthesis algorithms, (3) interactive control by the user, and (4) design quality analysis.

Analysis Vs Synthesis Analysis is like the process of deduction wherein you cut down a bigger concept into smaller ones. As such, analysis breaks down complex ideas into smaller fragmented concepts so as to come up with an improved understanding. Synthesis, on the other hand, resolves a conflict set between an antithesis and a thesis [...]
